SUMMARY

Software Engineer with **4+ years of experience** in designing, developing, and optimizing scalable web applications in mission-critical healthcare environments. Strong expertise in JavaScript technologies (React.js, Angular, Node.js, Express) and RESTful API development. Experienced in building reusable component-based architectures, improving system performance, and delivering high-quality enterprise software solutions. Adept at collaborating with Product Managers, QA, and DevOps teams in Agile environments while continuously improving software quality and delivery standards.

EDUCATION

ABES Engineering College
07/2022

MCA: Computer Applications
GPA: 8.9

SD College of Management Studies
10/2020

BCA: Computer Applications
GPA: 80%

SKILLS

Backend Technologies: NodeJS,
ExpressJS, JavaScript, REST API

Frontend Technologies: React,
Angular, HTML5, CSS3

Databases: SQL, MongoDB,
PostgreSQL

Project & Development Tools: JIRA,
VSCode, GitHub / Bitbucket, Git,
Postman

Unit Test Case : Jest, Chai and
Mocha

AI-Powered Developer Tools :
Amazon Q, GitHub Copilot,
ChatGPT, Cursor

WORK EXPERIENCE

IQVIA - Software Development Engineer 1
Chennai • 06/2025 - 04/2026

- Gained in-depth understanding of the **Hospital Information System (HIS)** product, including core workflows and enhanced modules, working across **frontend (React)** and **backend (Node.js 10.x & 20.x, Express.js, MongoDB)**.
- Built reusable **React components** following clean coding standards and component-driven architecture.
- Designed, developed, and maintained **RESTful APIs** using **Node.js and Express.js**, ensuring secure and scalable backend services.
- Created, optimized, and maintained **complex MongoDB queries and aggregations** to meet business requirements and enhance **database performance and efficiency**.
- Debugged and resolved **complex production issues** using browser **DevTools and server-side debugging**, reducing load times and improving system stability.
- Delivered high-quality solutions within **tight deadlines**, ensuring **client satisfaction and minimal downtime**.
- Implemented **headers and watermarks in PDF reports** using the **html-pdf** package to meet reporting and compliance requirements.
- Leveraged **AI-powered developer tools** such as **Cursor, GitHub Copilot, and Amazon Q** to improve development speed, code quality, and problem-solving efficiency.
- Improved UI performance and user experience through code refactoring and optimization.

Cognizant Technologies Solutions - Associate Software Engineer
Pune • 04/2025 - 06/2025

- Collaborated with **cross-functional teams** (product, QA, DevOps) to design, develop, test, and deploy **high-quality software solutions** for **Wellmark Blue Cross and Blue Shield** (Health Insurance domain).
- Designed and developed **scalable, reusable React components** for enterprise-level applications, following best practices and performance standards.
- Actively participated in **Agile sprint planning**, estimating task complexity, breaking down user stories, and prioritizing deliverables to meet release goals.
- Created, enhanced, and maintained **complex backend endpoints** in existing applications to support evolving business requirements.
- Authored **code fixes, refactors, and feature enhancements** for inclusion in upcoming releases, ensuring backward compatibility and stability.
- Debugged and resolved **complex production and pre-production issues**, delivering **clean, optimized, and maintainable code** under tight deadlines.
- Developed **unit and integration test cases** using **Jest, Chai, and Mocha**, improving test coverage and reducing regression issues.
- Built and fixed **RESTful APIs** using **Node.js (20.x)** and **Express.js**, and deployed applications using **CI/CD pipelines** for automated builds and releases.
- Used **Git/Bitbucket** for version control and actively participated in **code reviews**.

Cognizant Technology Solutions - Programmer Analyst

Pune • 08/2022 - 03/2025

- Designed and developed **React.js components** for scalable enterprise applications.
- Upgraded and modernized legacy modules by integrating **React.js** with backend APIs to improve maintainability and responsiveness.
- Integrated REST APIs with React using **Axios/Fetch**, implemented loaders, global error handling, and improved data-fetch workflows.
- Worked on upgrading various Lambda and batch APIs from older versions to the latest version in Node.js.
- Developed batch API, **scheduled batch using CRON** expression in the release pipeline, and files stored in **S3**.
- Created endpoints in existing Lambda APIs for the updated Swagger.yml file and controllers file.
- Debugged and analyzed code using CloudWatch logs, and added a breakpoint in VS Code.
- Developed unit test cases using **Jest and Chai, Mocha**, of all controllers and service files.
- Upgraded various Lambda and batch APIs from older versions to the latest version in Node.js.
- Ensured delivery of the task mentioned in the user story within the sprint.
- Upgraded the Node.js version (14.x to 18.x) in the Wellmark BlueCross and BlueShield project.

Cognizant Technology Solutions - Internship

Noida • 02/2022 - 07/2022

- I gained an understanding and worked in **HTML, CSS, JavaScript, React, and Node.js**.

- I worked on a project involving CRUD operations that created a UI.
- Created a table in which data can be inserted using the POST operation, updated using the PUT operation, retrieved using the GET operation, and deleted using the DELETE operation.
- Developed a REST API to implement CRUD operations using Node.js and Express.js.
